# LAKE BURTNIEKS

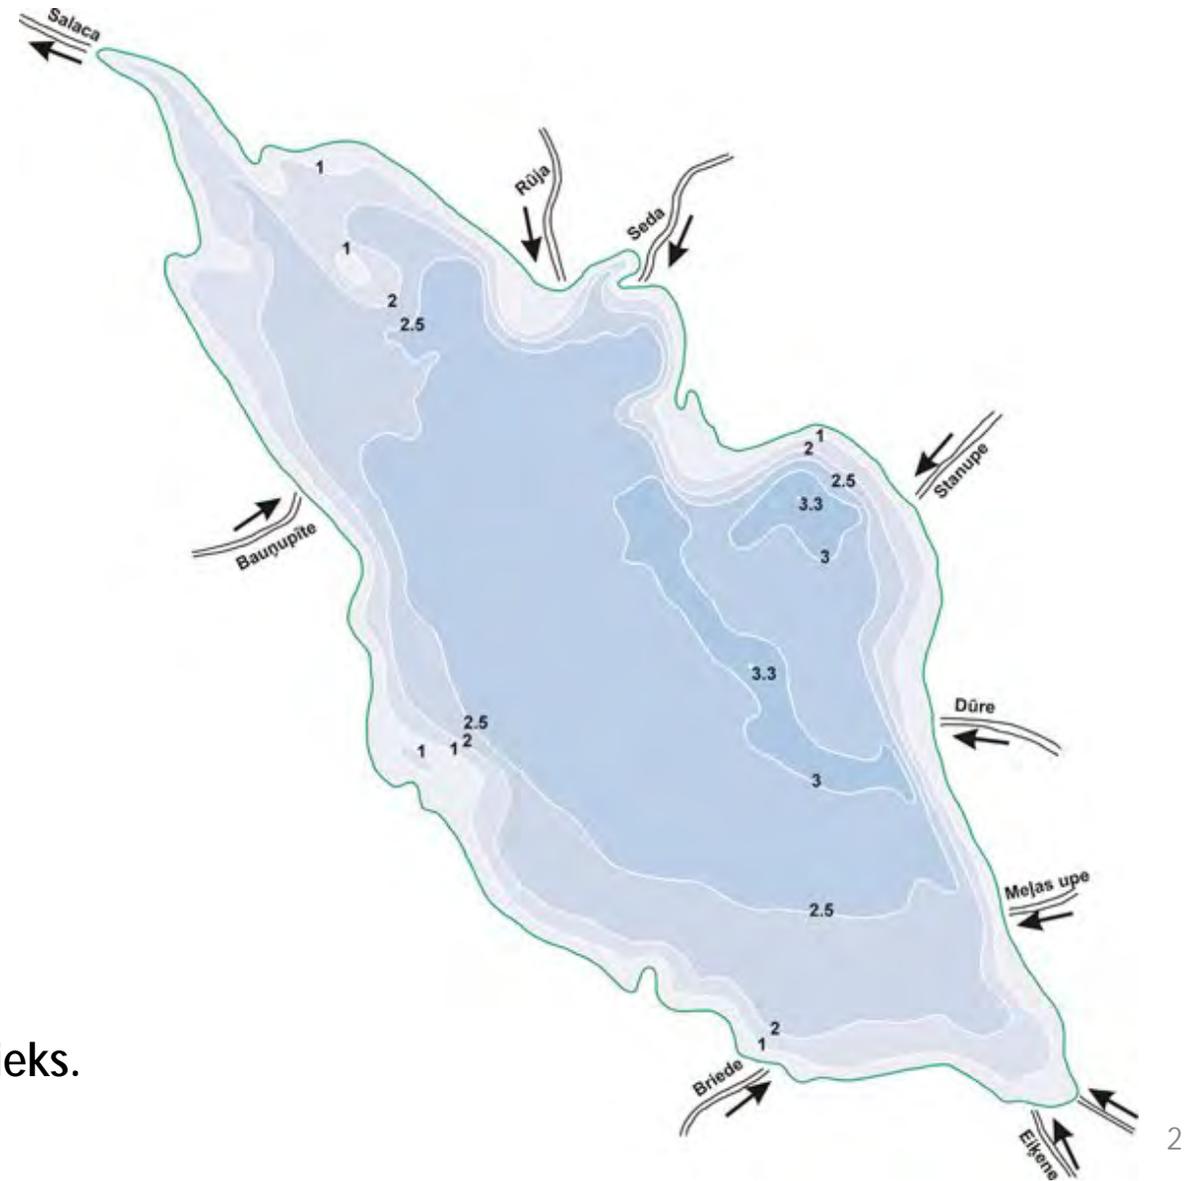

Table 1. Main parameters of Lake Burtnieks

|                   |                          |
|-------------------|--------------------------|
| Surface area      | 39.01 km <sup>2</sup>    |
| Mean & max depth  | 2.2 & 3.3 m              |
| Catchment area    | 2215 km <sup>2</sup>     |
| Inflowing rivers  | Seda, Rūja, Briede, etc. |
| Outflowing rivers | Salaca                   |

## The economic significance:

- § 8 boat bases and rentals;
- § 13 guest houses around the lake;
- § 9399 fishing licenses issued in 2016;
- § Income from fishing licenses – 33 546 EUR.

# HIGHLIGHTS FROM THE HISTORY

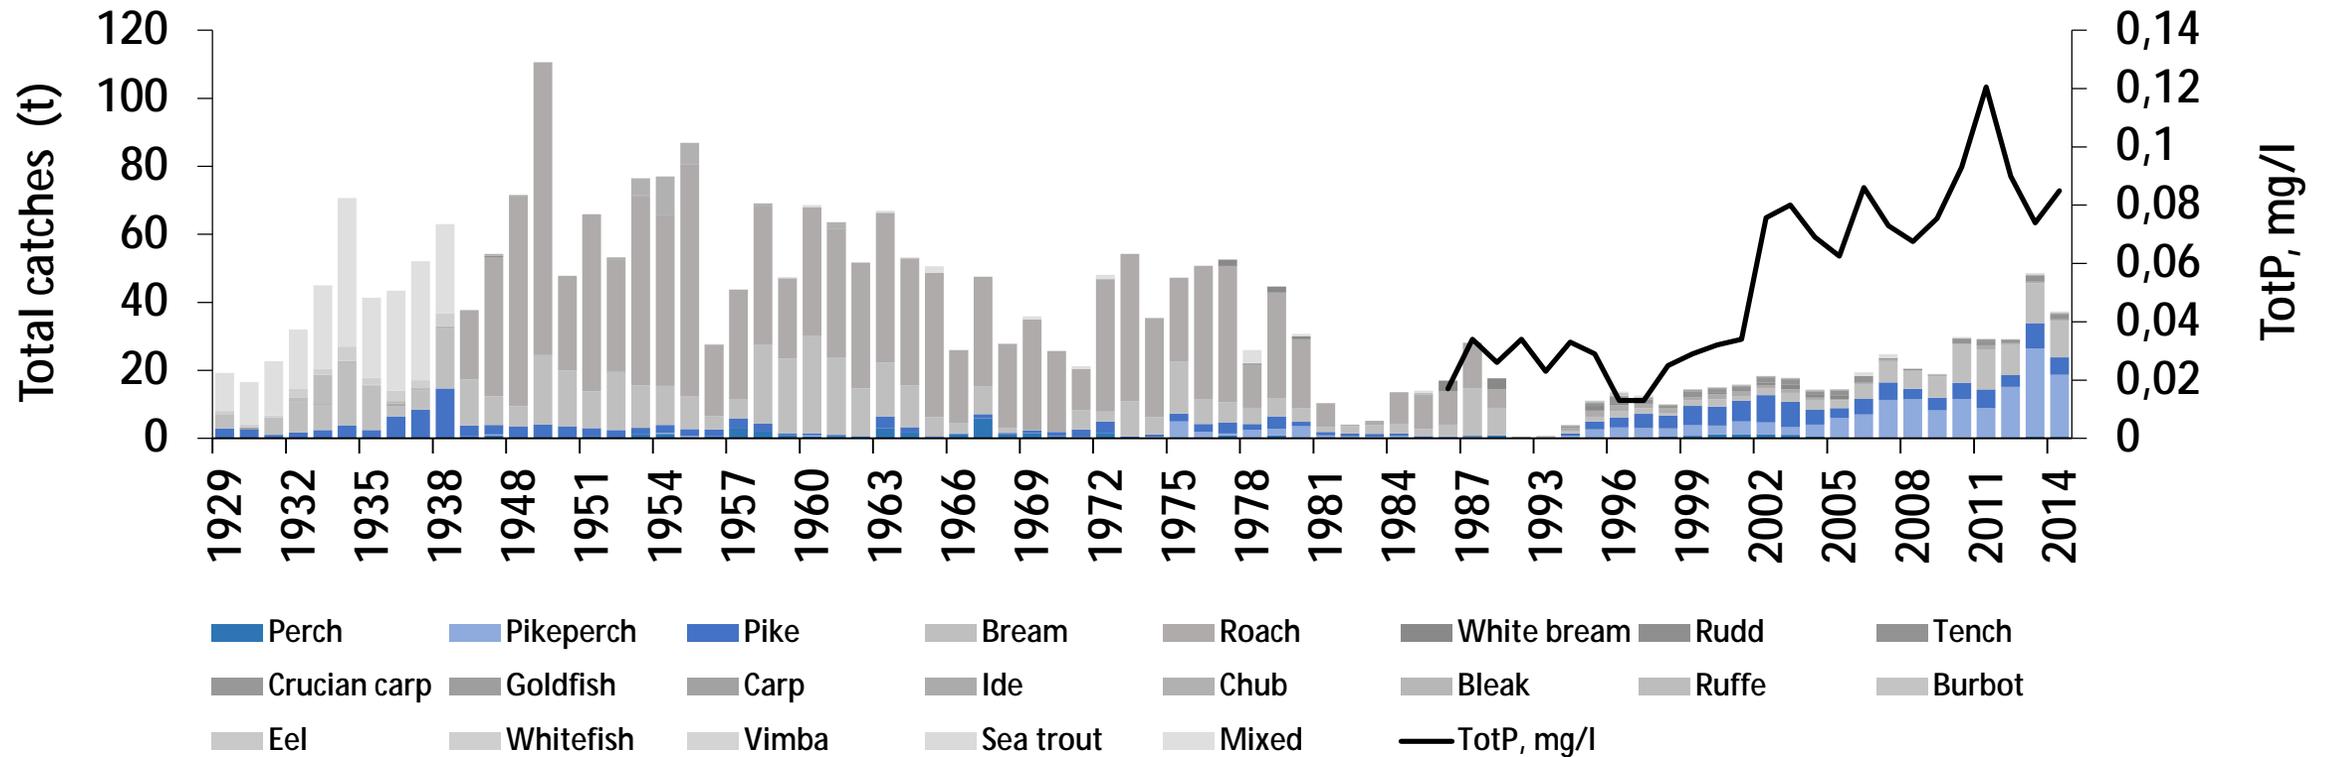

Fig.3. Total catches in Lake Burtnieks (1929-2014) vs total phosphorus concentrations in the water column.

# FIELD SAMPLING

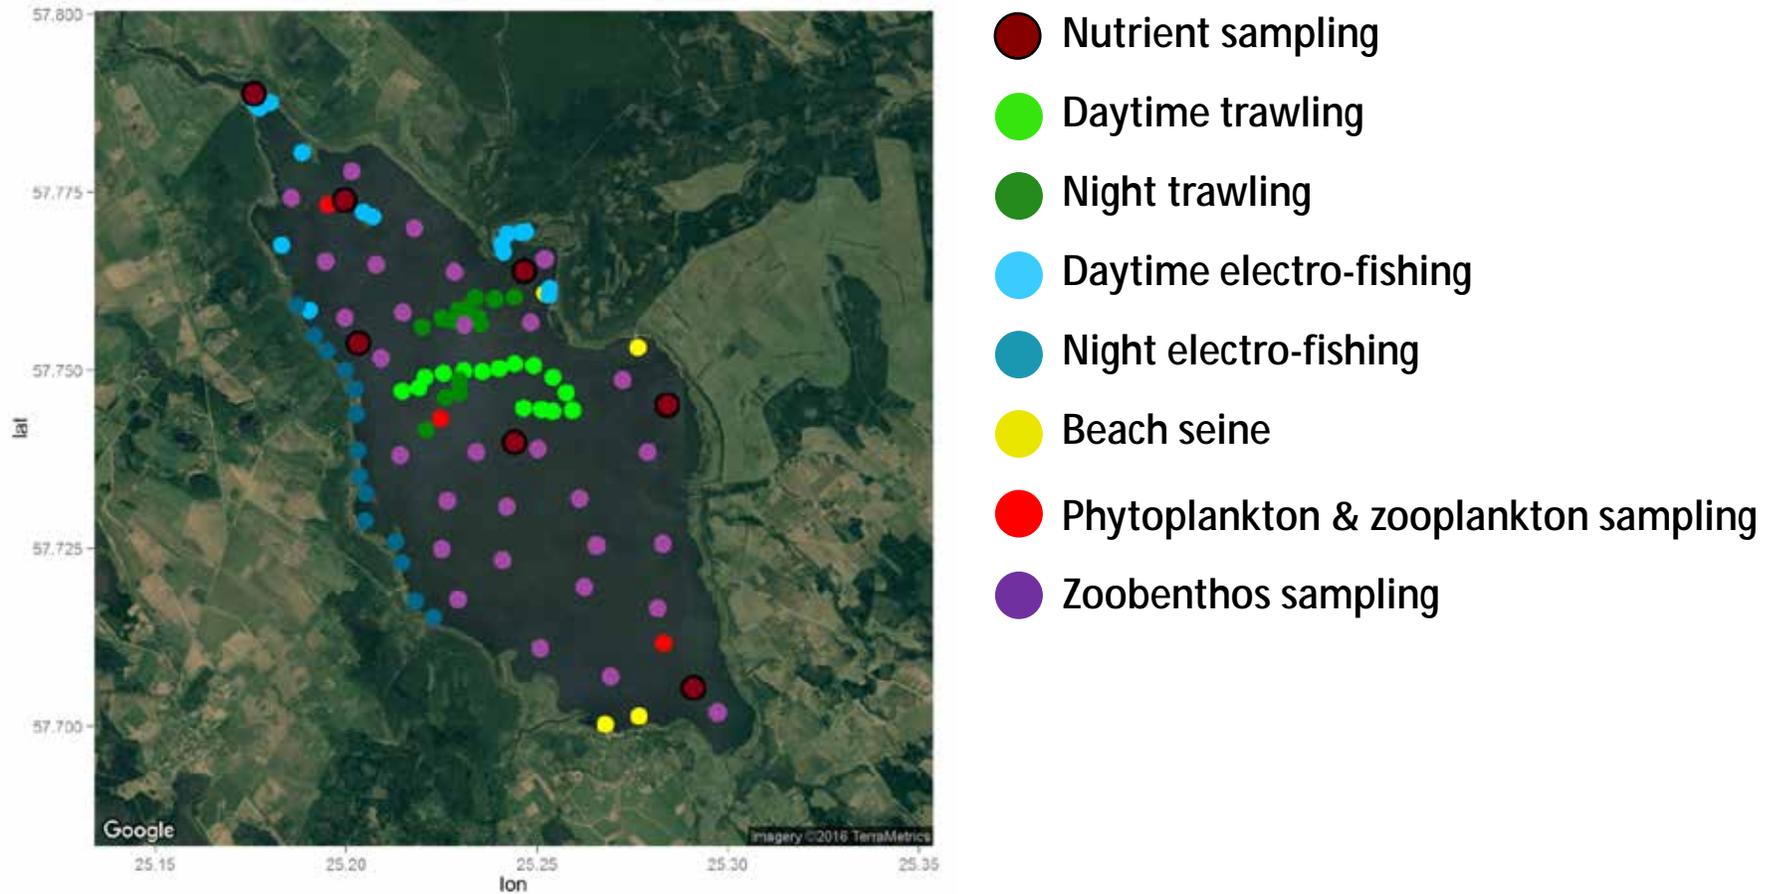

Fig.4. Stations for field sampling campaign in Lake Burtnieks. 2013 – 2014.

# ECOSYSTEM STATUS OF LAKE BURTNIEKS

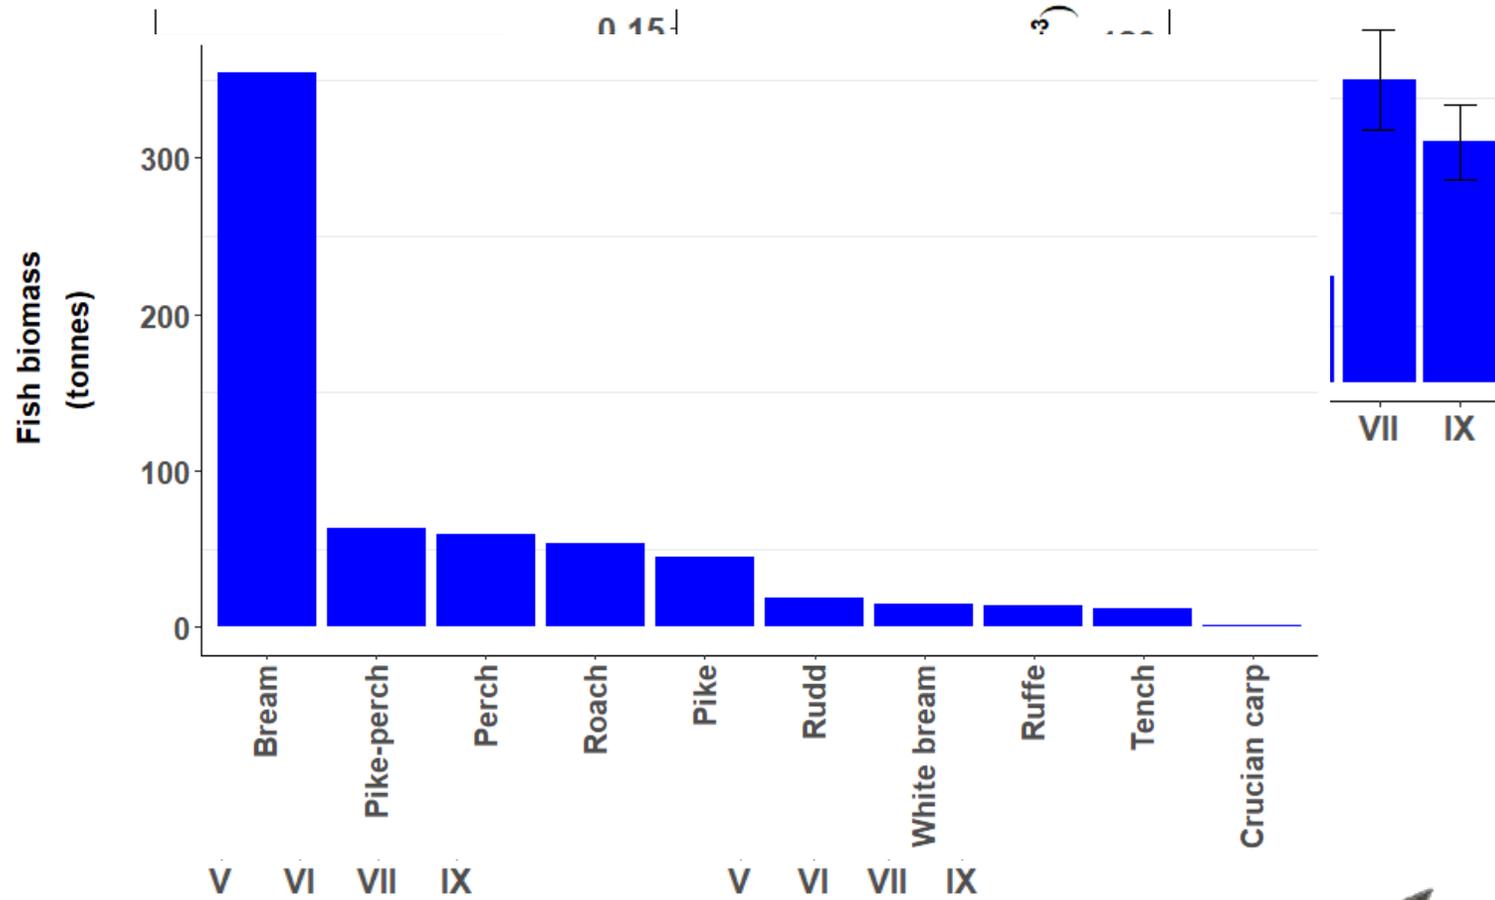

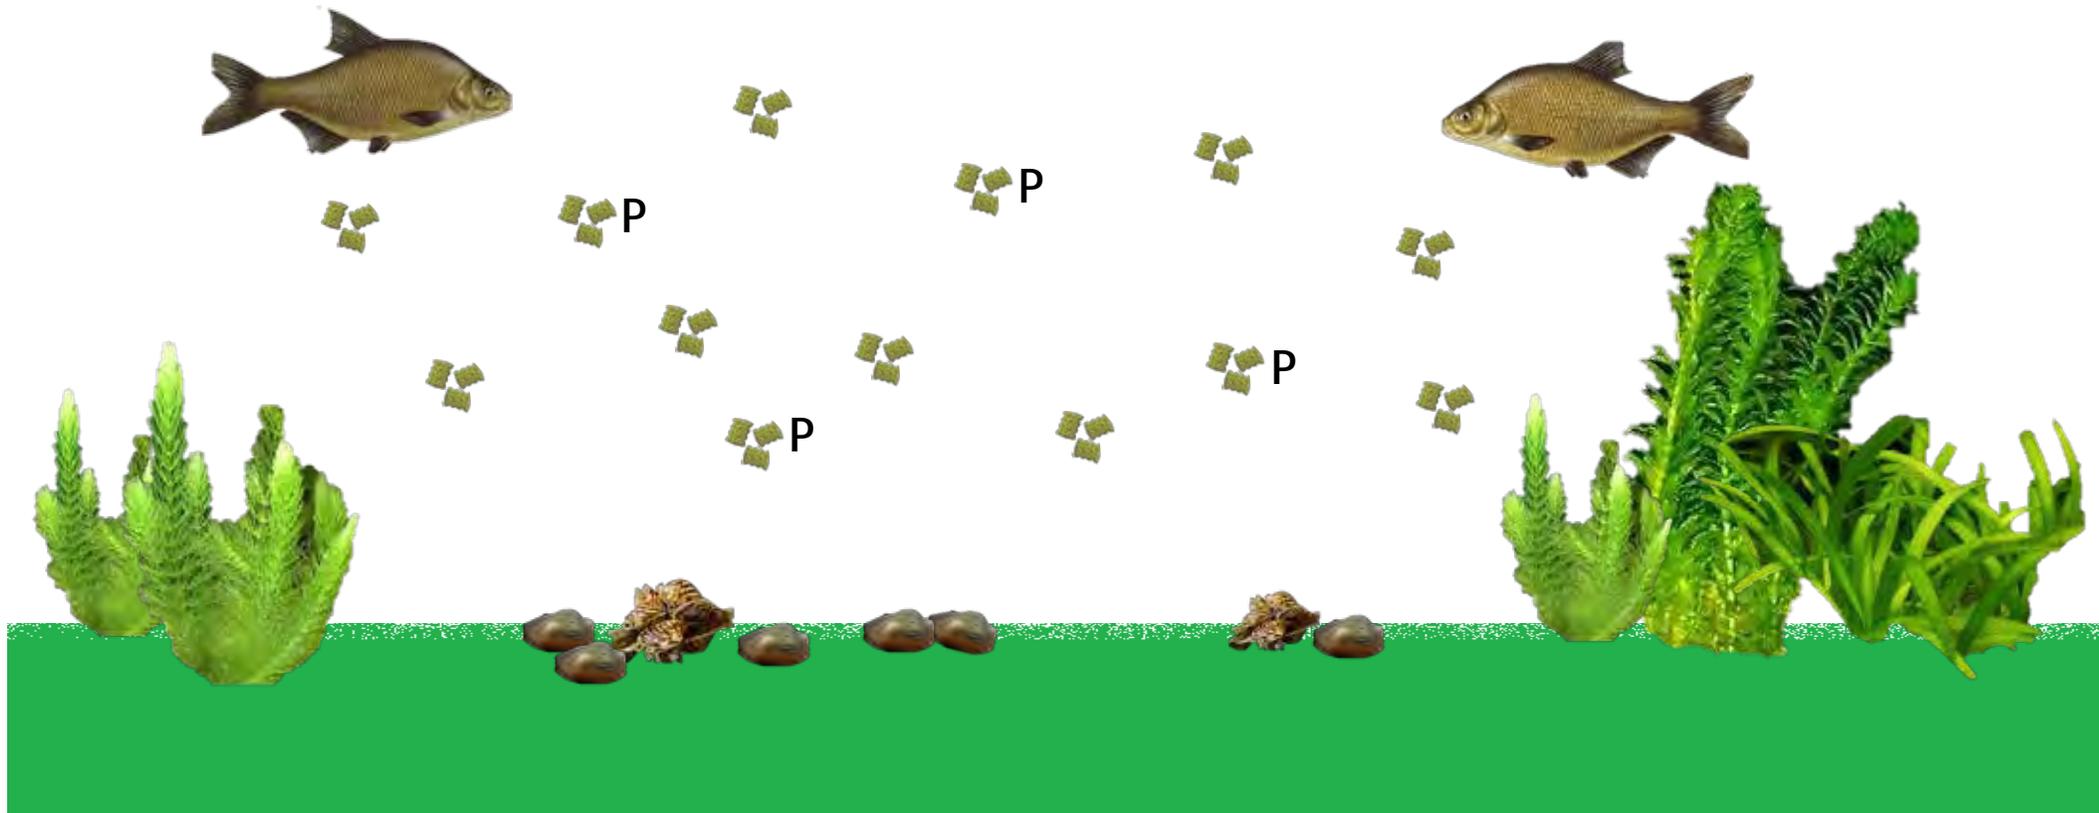

Fig. 9. Fish biomass and species composition in Lake Burtnieks at the summer season in 2014. spring-summer season in 2014.

# FISH-INDUCED SEDIMENT RESUSPENSION

---

# ECOSYSTEM STATUS OF LAKE BURTNIEKS

---

*Table 2. Ecosystem status classification for shallow brown-water lakes with high water hardness*

|                      | Very good | Good  | Average      | Bad          | Poor   |
|----------------------|-----------|---|--------------|--------------|--------|
| Ptot (mg/l)          | <0.03     | 0.03 - 0.055                                | 0.055 – 0.08 | 0.08 – 0.105 | >0.105 |
| Ntot (mg/l)          | <0.8      | 0.08 – 1.3                                  | 1.3 – 1.8    | 1.8 – 2.3    | >2.3   |
| Chlorophyll-a (µg/l) | <7        | 7 - 12                                      | 12 - 40      | 40 - 60      | >60    |
| Secchi depth (m)     |           | Not applicable due to intensive water color |              |              |        |
| Phytoplankton (mg/l) | <1        | 1 – 2.5                                     | 2.5 - 5      | 5 - 10       | >10    |

# POSSIBLE SOLUTIONS

---

- Ø External nutrient load reduction;
- Ø Sediment dredging;
- Ø Water column phosphorous adsorption;
- Ø Biomanipulation of fish community.

*Picture 3. Biomanipulation of fish community.*  
Source: [externalworksindex.co.uk](http://externalworksindex.co.uk)

# MODEL SUGGESTIONS

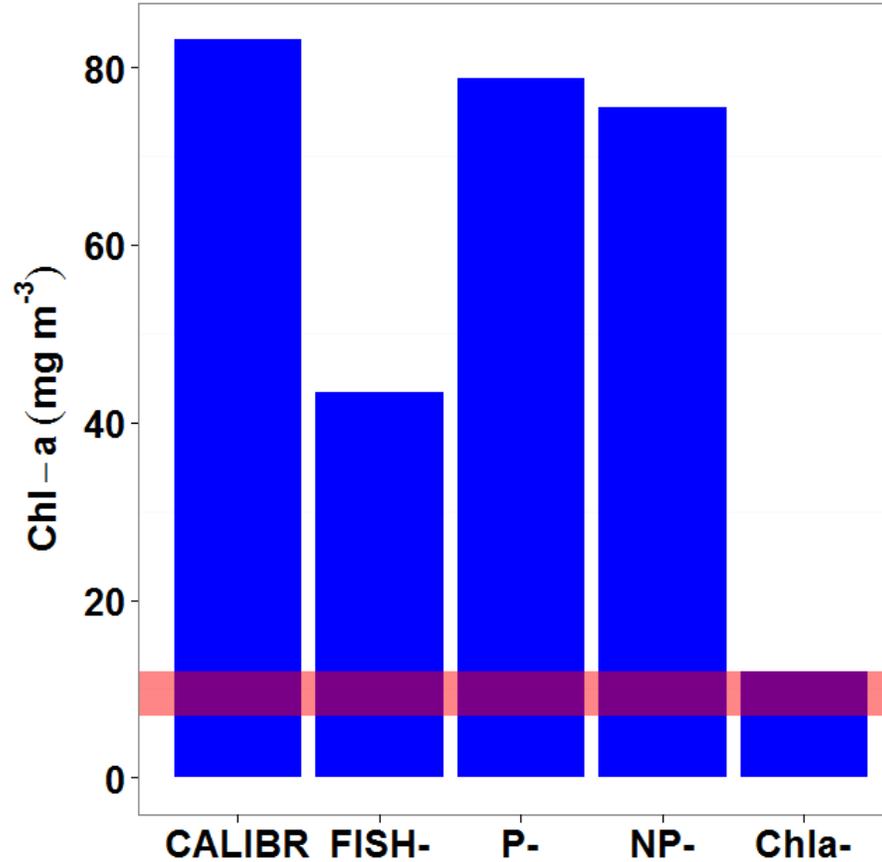

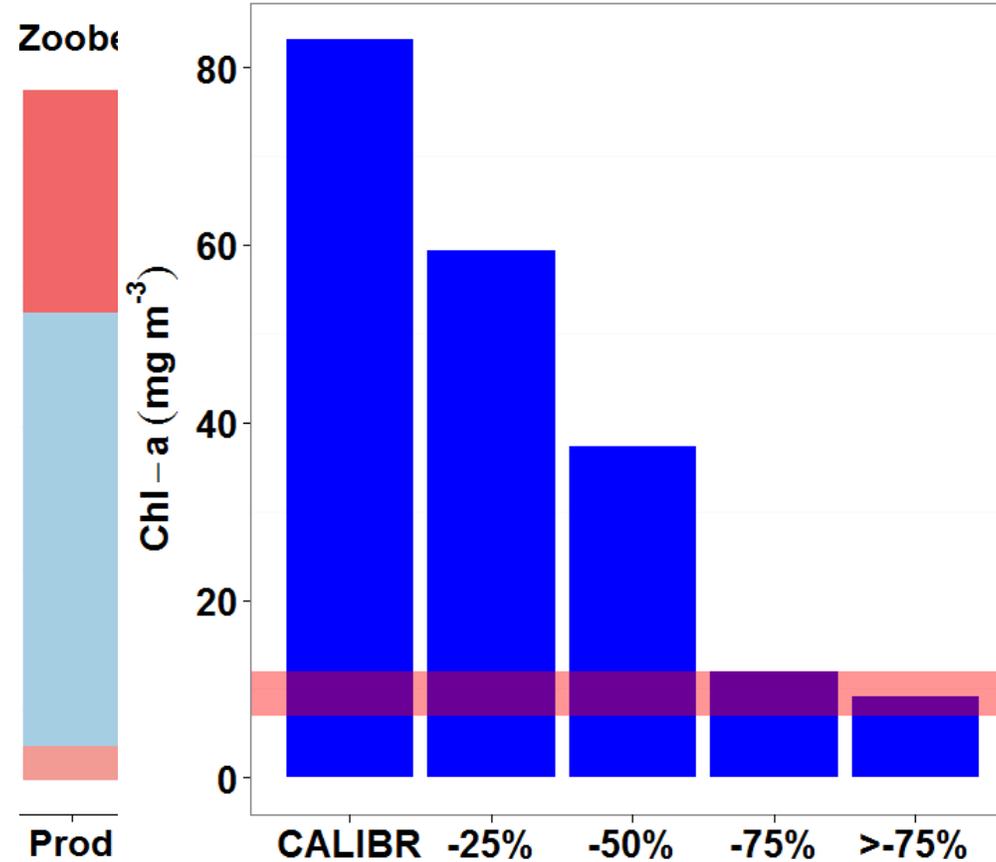

Fig. 11. Fish biomass manipulation and nutrient reduction effects on chlorophyll-a summer concentration.

lar Fig. 12. Effects on chlorophyll-a summer concentration by gradual reduction of cyprinid fish biomass with parallel nutrient reduction by 30%.

# CURRENT ACTION

---

*Picture 4. Demonstration of biomanipulation in Lake Burtnieks.*

# FUTURE THREATS

---

Ø Internal nutrient loads– phosphorus diffusion from sediments to the water column;

Ø Climate change:

§ Water temperature increase;

§ Extended vegetation season, including for cyanobacteria blooms;

§ Invasive species from warmer climate zones.
